### 1. Abstract

Physics has discovered the so simple, so beautiful, so compelling secret of everything. Lo and behold, everything is just space, space and space. Nothing but space. Time is one-dimensioned space, L1. Mind, consciousness, intelligence and memory are two-dimensioned space, L2. Things that can be seen with your eyes are three-dimensioned space, L3. That's all. Space is plain 0. Circumscribed 0 is dimensioned space; dimensionless space is a dimensional space. People's Gods are just the totems of their original races/clans/nations. God the very is Adimensional Space. With this, physics takes up the command of this world and the other world.

### 2. Introduction

Newton spake, "Truth is ever to be found in simplicity, and not in the multiplicity and confusion of things." Now turn to simplicity: Where do you stand? In space. What is space? The physical extent in the front, on the back, on left and right, up and down. Suppose this physical extent start sinking from all around. Its dimensions come down, down and down and finally to a state called singularity. Such a dimensionless singularity was this universe to start with. The dimensionless space big-banged. From that big bang developed space. From space developed this world. That is the simple genesis of the universe.

If the universe developed from a singularity, that singularity must have come from the shrinkage of a previous universe. And this universe must have come from the big bang of a previous singularity. And that singularity.....

### 3. Simplicity Commands

The First Simplicity Command: Singularity and the world are cyclic.

When the dimensionless singularity starts developing into dimensions of space, the initial dimension L1 is Time. The next L2 is consciousness, mind, intelligence, and memory. The still next

dimension L3 is energy and matter. Gravity is breaking dance [picture]. L3 is this physical universe. To be, a thing needs to be intelligible. To be intelligible, a thing needs to come under one (time), two (mind) and three dimensions (matter) of space. The universe wholly depends on the dimensionality of space. The base material for dimensional space (L1, L2, L3) is dimensionless or a dimensional space. A dimensional is unthinkable, because thinking needs dimensionality first thing.

Second Command: The ToE is 00.

The theory of everything, the final ultimate master theory, the theory of the world, lo and behold, is 00. The universe is so vast. It has about 1011 galaxies in it. Each galaxy has about 1011 stars in it. Each star has about 1011 physical bodies in it. But this vast universe is very-very-very small: a negligible about 5% of the overall cosmos. 95% of the cosmos is the dimensionless or a dimensional space which is 00 space. 00 existed before the big bang. 00 the a dimensional space is the unconditioned/dimensionless space; the 3D space is the conditioned/dimensioned space. Conditioning requires creation of a transformational generative grammar (TGG). So creation of a TGG is the first job of the big bang. It is because of TGG that quantum theory and general relativity are impossibly incompatible.

Gravity: Break Dance.

Third Command: God is 0 sans circumscription.

0 and not a Hero makes the world. The point where the observer, the observed and the act of observation are one and the same is God. That is the biggest 0, 0 sans circumscription. God created the world. Who created that God? And who created that God's God? And who created that God's-God's God? And who .... A never-ending question. Consciousness and intelligence are two-dimensioned space, L2. Because dimensions of space go on endlessly, so the question goes on endlessly. The observer remains where he is whereas the observed and the act of observation go on endlessly. The observer, the observed, and the act of observation unity is the solution. There it is 00, a dimensional space. The beyond of space is space itself. To be, a thing, anything, even an Almighty God, needs space first thing. Without space nothing ever is. So, there is not a beyond for space. Space is Everything. Space is the b-a-s-e-s-t, the f-i-r-s-t-e-s-t. It's final: space has not and cannot have a beginning, end or beyond. You know everything in the whole world but the question still haunts: who am I the knowing? Because your knowledge does not include the observer. Only when your knowledge includes the observer your knowledge is complete. When your knowledge includes the observer, you are God. God is 00 the all-knowing. The Gods of religions are the totems of their original races/tribes/clans.

Fourth Command: At c, the universe relapses to singularity.

Creation is haphazardness of the velocity of the speed and direction at which the phase of waves propagates through space; dissolution of the cosmos is the same velocity being un-identifiable or one with space. At c which is 300,000 km's per second (1) the observer, (2) the observed and (3) the act of observation the three become one and the same: L3 relapses to L2, L1 and ultimately to 00 the a dimensional. Suppose the consciousness-mind-memory-intelligence in you, which is two-dimensioned space, L2, hit c straight instead of going haphazard, it would have hit a dimensional space a. k. a. God.

Fifth Command: Newton's Third Law of Motion is the Creator.

Newton's Third Law of Motion says every action has its equal and opposite reaction. The reaction is instant or simultaneous. So, all action is virtually zero:  $(+) + (-) = 0$ . When we two meet, I meet  $(+) + (-) = 0$  and you meet  $(+) + (-) = 0$ . When we two make love, 0 makes love to 0. In childbirth, 0 bears 0. It's 0 dancing attendance on 0 all the way. Creation is space constantly reminding itself everything is itself, that is space. Space and 0 are the same. Space is 0 without circumscription. Hey poor man, you thought this Zero Magic to be the work of a Super Hero. Pity you.

Sixth Command:  $L \equiv 0$ .

For 00 the a dimensional, Creation needs a cause. Without a cause, 00 a dimensional space would forever remain unproductive. The cause of Creation is the menarche of space, which is

the big bang. Like women have their periods, space has its periodic oestrus. The energy bursts and the fast radio bursts are the blood. Maximum entropy is menopause. Gravity is the male partner for space. Gravity is the sole force on its own, which is absolute; the other forces are situational. The periodic oestrus is the Creator.

Seventh Command: The cause of Creation is the periodic oestrus in space.

A religion is its original race's 1. culture, 2. civilization, 3. art, 4. language, 5. literature, 6. architecture 7. names, 8. nomenclatures, 9. sense of value and proportion, 10. laws, 11. moral codes, 12. customs, 13. calendar, 14. history, 15. tradition, 16. aptitudes and 17. ambitions.

Eighth Command: A religion is its original race's race-centric worldview.

Nothing more and nothing less.

Ninth Command: Domesticate religions.

Live your religion within your race; let others live theirs within their own. That is religion simplicity. "Truth is ever to be found in simplicity, and not in the multiplicity and confusion of things."

Tenth Command: If you are not at home with your race's worldview, convert to physics.

Physics' worldview is physics simplicity.

#### 4. Conclusion

Newton space, "Nature is pleased with simplicity, and affects not pomp of superfluous cases"

#### Glossary

a dimensional space: Space without dimensions.

break dance: A dance move.

c: Represents the speed at which light propagates in a vacuum.

oestrus: Heat, rut

general relativity: A geometric theory of gravity that explains how massive objects warp space and time, creating the force of gravity.

maximum entropy: Measure of randomness or disorder within a system.

menarche: A girl's first period.

menopause: Final menstrual period of a woman.

quantum theory: The theory that describes the behaviour of matter and energy at the atomic and subatomic levels.

transformational generative grammar (TGG): A linguistic theory developed by Noam Chomsky that describes language as a system of rules capable of generating all grammatical sentences.

velocity: The speed and direction at which the phase of a wave propagates through space.
